ATTIVITA': Spatial planning and architectures at the time of emergencies

The Covid 19 crisis has once more revealed the relevance of spatial dimensions in the governance of complex crises. In the last year, governments across the globe have designed new geographies – no-go areas, red zones, safe corridors – at a plurality of scales: national, regional and local. Although this happened at an unprecedented scale, this is far from being new. Under certain circumstances, governments have mobilized extraordinary powers to face disasters – earthquakes, floods, infrastructural collapses and so on - or organize large events. And through these powers they have put in place new geographies and have also promoted spatial planning decisions regarding the location of certain settlements and the creation of specific functions. In this context, the project will focus on spatial planning under emergency situations looking at recent case studies also based on the profile and linguistic skills of the participants. By building charts, maps, infographics and electronic archives we will analyze and discuss some of these cases with the overall goal of telling full, compelling stories of spatial and architectural interventions built under conditions of emergency.

NUMERO DI TIROCINANTI RICHIESTI PER L'ATTIVITA':

(Nel caso si intenda ospitare più di 5 tirocinanti dovrà essere preventivamente contattato il responsabile SAT del corso di studi di appartenenza dello studente consultabile nel sito della Scuola AUIC – paragrafo “Responsabili SAT”

<http://www.auic.polimi.it/studenti/tirocini-curricolari-obbligatori/>

DISPONIBILITA':

from January 11th - to December 23rd, 2021
